#### **Adhesives Manufacturer, Suffolk County, NY**

**INTEX conducted an emissions compliance test program at an adhesives manufacturer located in Suffolk County, New York as part of the facilities Title V air permit renewal. INTEX determined the total hydrocarbon destruction efficiency and mass emissions rates of two thermal oxidizers in operation at the facility. EPA Method 25A was utilized to determine the total hydrocarbon concentrations, while EPA Method 18 was utilized to determine the methane concentrations.**

**Prior to the compliance testing program, INTEX aided the facility in tuning the oxidizers. During the pre-compliance program, INTEX was able to coordinate the recording of the appropriate process data needed and necessary production rates needed for the compliance testing program. This pre-compliance program ensured that the compliance test went smoothly and effectively.**

**INTEX was responsible for preparing a pre-test protocol and final test report. INTEX then submitted these reports to the New York State Department of Environmental Conservation for review and approval. INTEX was able to coordinate testing between the regulatory agency and the facility, allowing the test to be conducted on time and on budget.**
